Group Contribution

Project: MediVault medical information management system

Jabyn Obrero

Co-developed the domain classes in **models.py** with Vien Paje.

Vien Paje

Co-developed the domain classes in **models.py** with Jabyn Obrero.

Shared models.py classes

Permission, Role, User, Patient, MedicalRecord, HistoryEntry, Allergy, Medication, PatientProfile, and EmergencySummary.

These classes define permissions and users, patient information, clinical record types, role-specific profiles, and emergency summaries. The clinical records use inheritance and shared methods for record details and emergency relevance.

Ronald Dean Sanchez

Developed all remaining project components:

app.py, templates/, static/: Flask routes, web pages, navigation, and visual styling.

database.py, repositories.py, seed.py: SQLite schema, data access, default roles, and demo records.

access.py, security.py: permission enforcement, routine and emergency access, audit logging, authentication, and encryption.

validation.py, reports.py: form validation, dashboard statistics, and CSV audit export.

README.md, requirements.txt: project documentation and dependency configuration.
